

Group Assignment 1 - Project: Initial Prototype

URL: <https://kevinle1021.github.io/prototype/>

Prototype Description:

This prototype is a simple task list application that allows users to add, edit, delete and mark any items as completed. The prototype focuses on user-facing interactions such as list management and basic filtering functions to demonstrate key user actions.

Use Cases:

- (1) Users can add items to a list by typing in a text box and hitting an “Add” button
- (2) Users can check off items in a list by clicking on a checkbox next to each item in the list
- (3) Users can edit the text of each item in the list by hitting the “Edit” button, editing the text in the text box that appears, and clicking the “Save” button.
- (4) Users can delete items from the list by clicking the “Delete” button next to each item in the list.
- (5) Users can filter the list to show all items, only active (unchecked) items, or only completed (checked items) by clicking the “All”, “Active”, or “Completed” buttons below the list.
- (6) Users can remove all completed items at once by clicking a “Clear Completed” button, which deletes every item that has been checked off.
